

Figure 1 illustrates the experimental setup. A subject is seated at a table, looking at a video screen. A camera is positioned above the screen. A horizontal bar is placed on the table, with a vertical rod passing through its center. The rod is connected to a motor unit. The motor unit is connected to a power source. The video screen displays the subject's view of the bar and the rod. The subject is instructed to move the bar horizontally. The motor unit is used to move the rod vertically. The power source provides energy to the motor unit.

Age Group	Percentage
18-24	~10%
25-34	~35%
35-44	~25%
45-54	~20%
55-64	~15%
65-74	~10%
75-84	~5%
85+	~2%

Figure 1 is a 3D bar chart showing the number of cases for each combination of sex and age group. The x-axis represents age groups (0-14, 15-24, 25-34, 35-44, 45-54, 55-64, 65-74, 75-84, 85+). The y-axis represents sex (Male, Female). The z-axis represents the number of cases (0 to 100). The chart shows that the highest number of cases is in the 0-14 age group for both sexes, with males having slightly more cases than females. The number of cases decreases as age increases, with a slight increase in the 65-74 age group for both sexes.

Figure 1 consists of seven bar charts, each representing a different demographic or lifestyle category. The x-axis for all charts represents age groups: 18-24, 25-34, 35-44, 45-54, 55-64, 65-74, and 75+. The y-axis represents the percentage of respondents, ranging from 0% to 100%.

Figure 1 Schematic of the study design and flowchart of participant flow. The schematic at the top shows a timeline from 2007 to 2010, with various data collection points and interventions. The flowchart below shows the progression from 1000 participants in 2007 to 100 participants in 2010, with various dropouts and exclusions.
